● DESCRIPTION

The focus of the third module of the SAT Program will be on gaining some more profound insight into the *psychology of the Enneatypes* by investigating the specific *defense mechanisms* of the various personality structures and the guise in which they appear in the 27 *subtypes*. This special teaching, which is exclusively shared within Claudio Naranjos SATs, opens a window of possibility to reach deeper levels of self-acceptance and to develop trust in one's own intuitive abilities. In this frame work, the *psychotherapeutical laboratory* which will be maintained continuously over the 9 days plus the accompanying supervision will provide participants with an opportunity to continue both their personal work on the ego structures and on the resulting problems in their lives on an indepth basis. Also, we will work on the specific issues and difficulties which we will face if we begin to engage in helping and supporting others. this will initiate a learning process in which the participants will work with each other under supervision and provide mutual support in ongoing self-inquiry and growth.

In this sense, the third module represents the heart of the SAT Program. Both its structure and its methodological approaches and exercises make it an exceptional training. Introduction into *Tibetan meditation according to the Vajrajana tradition* clears the path to compassion for oneself and others, which is at the same time nourished by *mindful body, breath and movement work* as well as *reencountering perinatal experiences*. Work in the large forum as well as in small groups plus guided work with a partner are geared towards supporting the process.

Participation is contingent on completion of Modules I and II of the Sat Program either in Germany or france or in another country. There are no restrictions as to how much time may have elapsed between the modules.
